BUILDING AUTOMATION & CONTROLS

Automated Solutions to Help Minimize Building Costs and Maximize Savings

EMCOR Services Integrated Solutions offers design, installation, retrofit, integration, and 24/7 management for automation controls. **When properly configured, automation has helped cut client operating costs and improve HVAC system performance.**

Smart Buildings. Smart Decisions.

Building automation and controls systems free up time for facilities managers, allowing them to handle critical tasks and make proactive decisions to enhance operations. Decisions are informed by these systems' enhanced analytical capabilities. Newer controls technology can analyze data in real-time, identify opportunities for improvement, and even begin to diagnose pending failures before they happen.

Installation That's Brand Neutral

Looking to integrate existing systems, we provide service and installation of Open Protocol solutions. We can integrate automation systems at virtually any stage of the process. Plus, our relationships with leading manufacturers allow us to solve compatibility issues quickly and without interruption.

After installation, we can provide dedicated maintenance and monitoring. We offer objective, non-partial service for systems. Factory-certified automation technicians can provide ongoing technical support to keep your automation system running smoothly.

CONTROLS & AUTOMATION SERVICES

- Complete system design and Integration
- Installation
- Programming
- Networking
- Start-up/Commissioning
- Customized projects
- Preventive and emergency maintenance
- Design-build
- Engineering and construction
- Custom data tracking, analysis, reporting
- Remote monitoring

MECHANICAL SERVICES

- Customized HVAC maintenance programs
